

NOTE ON EXECUTION

Sotgia Francesca - 513067

In the folder there are all the files needed for the execution. Everything is called inside the main.mlx.

I uploaded both the .m and .mlx files but I would recommend running and looking at the main.mlx file since I programmed the project on that.

In the main.mlx file it is also possible to visualise all the images.

Note that the section where the Genetic Algorithm is defined (line 240 - 256) takes a lot of time to run. Its results can be seen in the main.mlx file and their are then stored inside the opt_Segmentation.fis.
